

Packaging Instructions

Leak-proof/sift-proof specimen container (primary container) wrapped securely within a leak-proof/sift-proof secondary container.

Primary containers must be leak proof and must not shift or touch one another during transport.

Secondary container can be hard or soft sided and leak proof. Absorbent and cushioning material must be placed with primary containers into the secondary container.

List of Contents: this is a list of what is in the package and should be placed between the secondary container and outer container.

Outer container must be of adequate strength for its capacity, mass and intended use.
